

Asset Tracking

Asset Tracking Overview:

ProVue Asset Tracking provides a cost effective method of tracking key company assets. Track tooling, gages, stamping dies, computers, shipping containers and test equipment in real time. Save time and money by using the rugged wireless handheld computer to input asset activity. All transactions are handled instantly so there's no need to batch process asset information. You can also determine asset locations instantly and track historical movements from both your desktop and on the floor.

Choose barcode labels and/or RFID tags to identify assets and locations. Know where your assets are, how long they've been there and where have they been. Reduce tracking errors by scanning barcode or RFID tags rather manual entry.

ProVue Asset Tracking is sold as a stand alone application or integrated with our ProVue Server product. ProVue Asset Tracking comes standard with one extremely rugged wireless handheld computer. Track multiple assets and in multiple areas by simply adding additional scanners.
